## General Dentistry Overview

General dentistry focuses on prevention, diagnosis, and treatment of oral diseases.

Routine dental checkups help detect cavities, gum disease, and oral infections early.

Dental hygiene includes brushing, flossing, and professional cleaning.

## Dental Services (Detailed)

Dental cleaning (scaling) removes plaque and tartar.

Tooth filling repairs cavities using composite or amalgam materials.

Root canal treatment (RCT) removes infected pulp inside the tooth.

Tooth extraction removes severely damaged or decayed teeth.

Teeth whitening improves tooth color using bleaching agents.

Dental implants replace missing teeth permanently.

Orthodontic treatment (braces) aligns teeth and corrects bite issues.
